

Formatting Instructions for CCN 2026 Extended Abstracts

Anonymous Author(s)

Abstract

The abstract should be identical to the text version submitted in the web form and should not exceed 300 words. CCN has an interdisciplinary audience. Hence a good abstract should (a) give context about what the problem is and why it matters (b) give the contents and explain what was done and what was found (c) give a clear conclusion including what we learned and how it changes the way we think about the universe. And because Konrad is writing this, he can not avoid shamelessly plugging his writing guide. See you at CCN.

General Formatting Instructions

The text, tables and figures of a CCN extended abstract submission can be no longer than 2 pages. If needed, references may extend onto additional pages.

The text of the paper should be formatted in two columns with an overall width of 7 inches (17.8 cm) and length of 9.25 inches (23.5 cm), with 0.25 inches between the columns. Leave two line spaces between the last author listed and the text of the paper. The left margin should be 0.75 inches and the top margin should be 1 inch. Use 10 point Helvetica or compatible with 12 point vertical spacing, unless otherwise specified.

The title should be in 14 point, bold, and centered. The title should be formatted with initial caps (the first letter of content words capitalized and the rest lower case).

Indent the first line of each paragraph by 1/8 inch (except for the first paragraph of a new section). Do not add extra vertical space between paragraphs.

Structure

We recommend a clear structure, typically including an introduction, followed by sections such as methods and results for experimental work (which may be substituted e.g., for theoretical work), and concluded with a discussion.

First Level Headings

First level headings should be in 12 point, initial caps, bold and centered. Leave one line space above the heading and 1/4 line space below the heading.

Second Level Headings

Second level headings should be 11 point, initial caps, bold, and flush left. Leave one line space above the heading and 1/4 line space below the heading.

Third Level Headings Third level headings should be 10 point, initial caps, bold, and flush left. Leave one line space above the heading, but no space after the heading.

Formalities, Footnotes, and Floats

Use standard APA citation format. Citations within the text should include the author's last name and year. If the authors' names are included in the sentence, place only the year in parentheses, as in Newell and Simon (1972), but otherwise place the entire reference in parentheses with the authors and year separated by a comma (Newell & Simon, 1972). List multiple references alphabetically and separate them by semicolons (Chalnick & Billman, 1988; Newell & Simon, 1972). Use the "et al." construction for any citation with three or more authors, from the first mention onward.

Footnotes

Indicate footnotes with a number¹ in the text. Place the footnotes in 9 point type at the bottom of the column on which they appear. Precede the footnote block with a horizontal rule.²

Tables

Number tables consecutively. Place the table number and title (in 10 point) above the table with one line space above the caption and one line space below it, as in Table 1. You may float tables to the top or bottom of a column, or set wide tables across both columns.

Table 1: Sample table title.

Error type	Example
Take smaller	63 - 44 = 21
Always borrow	96 - 42 = 34
0 - N = N	70 - 47 = 37
0 - N = 0	70 - 47 = 30

Figures

Make sure that the artwork can be printed well (e.g., dark colors) and that the figures make understanding the paper easy. Number figures sequentially, placing the

¹Sample of the first footnote.

²Sample of the second footnote.

Figure 1: This is a figure spanning both columns.

74 figure number and caption, in 10 point, after the figure
75 with one line space above the caption and one line space
76 below it, as in Figure 2. If necessary, leave extra white
77 space at the bottom of the page to avoid splitting the
78 figure and figure caption. You may float figures to the top
79 or bottom of a column, or set wide figures across both
80 columns.

Figure 2: This is a figure spanning a single column.

81 Math

82 Display equations should be set out from the text and
83 numbered for easy reference:

$$P(H|D) = \frac{P(D|H)P(H)}{P(D)} . \quad (1)$$

84 Supplementary Materials

85 An “**Acknowledgments**” section may appear before the
86 references to include author contributions. Use of auto-
87 mated tools (such as generative AI) must be disclosed in
88 this section, describing the tools used and their role (e.g.,
89 drafting, editing, code generation). Technical appendices
90 are not permitted for extended abstracts.

91 Double-blind Review

92 CCN’s reviewing process is double-blind, and it is the
93 authors’ responsibility to anonymize their submissions.

94 Do not include any identifying information, such as author
95 names, affiliations, or acknowledgments, in the abstract,
96 main text, figures, or metadata. When citing your own
97 prior work, refer to it in the third person (e.g., “Author et
98 al. (2024) show . . .”) rather than in a way that reveals
99 your authorship (e.g., “in our previous work”). We en-
100 courage including links to code and artifacts in the spirit
101 of open science, but please ensure that the linked ma-
102 terial is anonymized; e.g., create a dedicated account
103 to host your material rather than the account of one of
104 the authors. Reviewers are not required to review linked
105 material.

106 Referencing Prior Work

107 Follow the APA Publication Manual for citation format,
108 both within the text and in the reference list, with the fol-
109 lowing exceptions: (a) do not cite the page numbers of
110 any book, including chapters in edited volumes; (b) use
111 the same format for unpublished references as for pub-
112 lished ones. Alphabetize references by the surnames of
113 the authors, with single author entries preceding multiple
114 author entries. Order references by the same authors by
115 the year of publication, with the earliest first.

116 Use a first level section heading, “**References**”, as
117 shown below. Use a hanging indent style, with the first
118 line of the reference flush against the left margin and sub-
119 sequent lines indented by 1/8 inch. Below are example
120 references for a conference paper, book chapter, journal
121 article, dissertation, book, technical report, and edited
122 volume, respectively.
